Field & Market

by Amerigo's UnitedTradestation

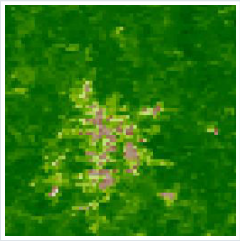

WEEK 45, 2026 · 2 NOV 2026 TO 8 NOV 2026

SUL DE MINAS · MINAS GERAIS · ARABICA

Hot afternoons, but fields look greener than usual

Your coffee is in flower. What happens over the next few weeks helps decide how many cherries are picked next season.

How green is the region?

Greener than usual for November

normal for November

now

bare ground — very green

Favourable Overall this week: none of our warning flags went up.

1 Where your coffee is now

Flowering
Sep to Nov
YOU ARE HERE · NOV

Cherries grow
Dec to Apr

Harvest
May to Sep

Flowers that hold on now become the cherries picked from May.

2 This week on the ground

32 °C
Hottest afternoon
Very hot for coffee in flower.
▼ Could hurt the crop

38 mm
Rain 19 Oct to 25 Oct
That's 38 litres of water on every square metre. 134% of the normal for these days.

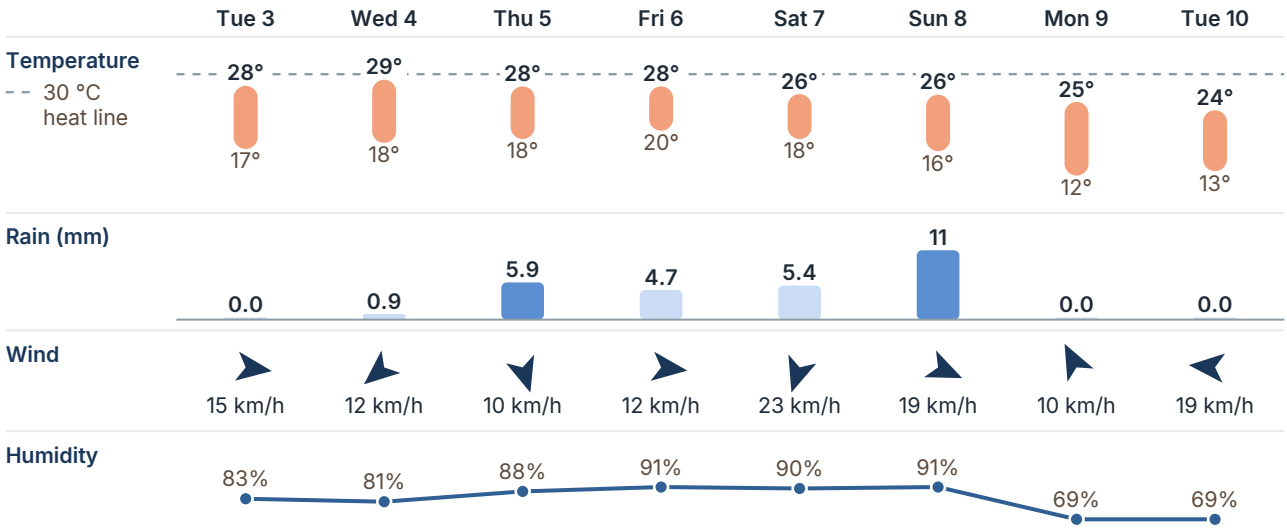

0
Fires nearby
No fires spotted by satellite within 10 km this week.

5 The bigger picture

The Pacific is running warm
El Niño +2.2

One three-month reading. An official El Niño or La Niña episode needs several consecutive seasons.

NOAA Climate Prediction Center

Your dollar this week
1 USD = 5.43 BRL

7.6% more BRL per dollar than a week ago, so a price set in dollars converts to more BRL.

European Central Bank, 30 Oct

Arabica, producer price in Guaxupé (MG): 1,730 BRL per 60 kg bag, week ending 23 Oct 2026.
A week earlier (16 Oct 2026): 1,680 BRL, a change of +3.0%.

Why you get this brief

Every week we read satellites, weather stations and the markets for your region, so you see what's coming before it reaches the farm. Free, in Portuguese, Spanish or English.

THE FULL NUMBERS Rain, past 7 days **38 mm** · Soil water, root zone (0 to 100 cm) **0.46 m³/m³** · Soil water, surface (0 to 7 cm) **0.46 m³/m³** · Temperature range, past 7 days **14 to 32 °C** · Mean relative humidity **75%** · Vegetation greenness (NDVI) **0.57, normal 0.46** · Fire hotspots nearby **0 within 10 km**

Rain measured 19 Oct 2026 to 25 Oct 2026 (CHIRPS v3, UCSB Climate Hazards Center).
Soil water measured 20 Oct 2026 to 26 Oct 2026 (ERA5-Land, Copernicus Climate Change Service).
Temperature and humidity measured 23 Oct 2026 to 29 Oct 2026 (NASA POWER). Averages use the days with data.
Soil water is the share of the soil volume filled with water (m³/m³; 0.30 means 30%). How wet a value is depends on the soil type, so it is shown next to its normal.
Days are UTC calendar days. Rain in mm, minimum and maximum temperature in °C.
